

GENOA™ ALLOWS YOU TO PLAN AND CONTROL TERMINAL OPERATIONS FOR ALL CARGO TYPES, MANAGE YOUR PROCESSES, AND OPTIMIZE VALUABLE TERMINAL ASSETS.

Genoa Breakbulk Management System®

is a comprehensive suite of systems that can help you effectively manage your multi-purpose terminal and deliver on customers' expectations.

With *Genoa Terminal™* you can pre-plan vessel operations, allocate resources, and reserve storage space in the sheds or on the quay. Thereafter, you can register discharge, damages and short or over-landed cargo, as well as generate a variety of operational reports. The *Genoa Storage™* system then enables you fully to manage all goods stored in warehouses or open areas.

Throughout the process, utilization of personnel and equipment can be registered, and fully-developed financial functions allow you to forecast costs, track purchase orders, even generate and post invoices.

Other Genoa modules—like *Genoa CFS™* for container stuffing and stripping—can be optionally deployed to enhance further your terminal's operations.

Genoa sets you apart from the competition by delivering real-time, accurate cargo information to your customers via the web with *Genoa Online™*. Give customers what they want and then some – exceed their expectations with anytime, real-time access to the latest inventory, historical data, and more.

HANDLE ALL CARGO TYPES including break-bulk, bulk, RoRo, and even containers. The system manages all cargo types from dedicated or multi-purpose vessels. Handle consignments, single units, lots, articles, containers...and much more. Genoa may also be optionally deployed with Spinnaker™ for fully graphical, container planning functionality.

INCREASE PRODUCTIVITY and reduce costly errors with the aid of RF devices to scan cargoes and instantly process vessel and terminal activities.

MANAGE RESOURCES by defining and allocating equipment and personnel resources to predefined tasks, or on the basis of "one-off" jobs. The system will even process and register job costing and control purchasing of services from third parties.

OPTIMIZE STORAGE AREAS by planning space in advance of cargo arrival. Register and manage client and customs holds and releases and gain complete cargo visibility. You can instantly see what is reserved for delivery or the balance of goods in inventory with Cargo Planner.

DRIVE CUSTOMER SATISFACTION and exceed expectations by delivering real-time cargo information. Automatically generate orders for inland transport, notify customers of delivery events via e-mail or fax, give them access to their inventory data online, and more.

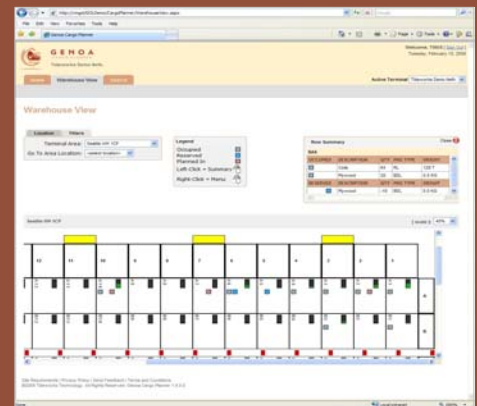

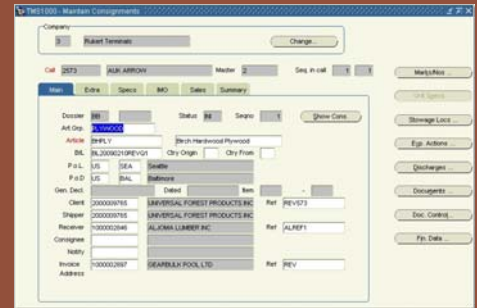

CONTROL COSTS and manage revenues with full financial capabilities. Automatically generate invoices, control your expenses and know your profits when the job is done—or even before, using the budget option.

MEASURE YOUR RESULTS by combining operational and financial information to produce your own Key Performance Indicators and other management information.

GENOA

BREAKBULK MANAGEMENT SYSTEM®

FUNCTIONAL OVERVIEW

GENOA INCLUDES THE FOLLOWING SYSTEM MODULES:

- **Genoa Terminal** Multi-Purpose Terminal System
- **Genoa Storage** Warehousing and Inventory Control
- **Genoa Yard** Container Yard and Gate Control System
- **Genoa CFS** Container Stuffing and Stripping
- **Genoa Online** Web Portal for Real-Time Data

GENOA ASP:

- Server and applications hosted and managed by Tideworks
- Includes same modules as Genoa
- Includes service level agreement for guaranteed performance

PROFESSIONAL SERVICES

- BUSINESS CONSULTING**
- TECHNICAL CONSULTING**
- IMPLEMENTATION SERVICES**
- USER TRAINING**
- 24 X 7 SYSTEM SUPPORT**
- EDI SERVICES**
- SOFTWARE CUSTOMIZATION**
